

Geode Software Project Profile

Online Artwork Catalog

Industry

Professional Artist

Need

The client needed an easy to use system for posting artwork to their web site. Once posted, the artwork needed to be in an easily browse-able catalog for visitors to the site such that the site could serve as an online portfolio of work.

Challenges

- The client's service provider was going out of business, so the site needed to be transitioned before all service was lost.
- The client was very happy with their existing solution and was being forced to migrate due to external factors

Solution Type

Custom Web Site

Solution

The resulting solution was a web-based application that replicated the features of the existing application and eliminated many of its shortcomings. The system allows the client to upload and categorize artwork for the web site, search the database, and manage their entire collection online. For visitors to the site, they can browse the full collection via a logically group lists of artwork.

Result

The solution allowed the client to seamlessly continue presenting their artwork on the web with no downtime due to the failure of their prior service provider. The new site automated tasks that previously had to be performed manually, such as maintaining a list of "recent" artwork.
